

Infrastructure Management: Virtualization

Virtualization has taken off in recent years, not by chance but because it is a proven technology that can increase organizations' competitive edge including yours.

In today's challenging business environment, organizations need to move quickly- whether it is entering new markets, introducing innovative products or initiating transformational process changes. IT plays a significant role in delivering the value-add that organizations need to create for their customers. Advancements in IT Infrastructure technologies and frameworks, such as **Virtualization and cloud computing**, are driving changes in the way organizations build and operate their Infrastructure environment.

About 70% of a typical IT budget in a non-virtualized datacenter goes towards maintenance of existing infrastructure, with little left for innovation.

Virtualization is a proven technology that is rapidly transforming the IT landscape and fundamentally consolidating IT Infrastructures. At AgreeYa, we strive to help you create an IT infrastructure that boosts the efficiency of business operations and promotes their competitive edge through our comprehensive Virtualization service offerings:

Server Virtualization

Server Virtualization enables companies to run multiple applications on fewer physical servers, breaking the “one application to one server model” legacy and making better use of your IT infrastructure. Without needing to worry about application incompatibilities and support issues, IT is able to improve asset utilization and potentially lower IT operation costs. AgreeYa, with its team of Virtualization technology experts, can help you leverage your existing Infrastructure investment. Depending on your existing infrastructure and requirements, our team can provide you the advantages of VMware vSphere, Microsoft Hyper-V, or Citrix XenServer.

Server virtualization brings you the following benefits:

- Fewer physical servers
- Lower power and cooling costs
- Reduced server provisioning time
- Improved availability and uptime
- Lower IT operating costs
- Faster disaster recovery

Desktop Virtualization

Empowering workers to be productive requires meeting new user demands while ensuring corporate data is kept secure. Today, users want seamless, consistent, secure and on-demand access to the applications and systems they need to do their job – from anywhere and on multiple devices. AgreeYa can help you meet these needs and more through its Desktop Virtualization capability. We provide:

- **Virtual Desktop Infrastructure (VDI)** simplifies resource management and optimizes desktop operations. We can deploy VDI at organizations of all sizes and utilizing Quest vWorkspace, VMWare, Microsoft Hyper-V and Microsoft Terminal Server, in addition to Citrix XenDesktop and XenApp. AgreeYa's VDI team will simplify resource management and optimize your desktop operations so you can focus on running your business.

- **Hosted Virtual Desktops** leverage the cloud, features zero upfront costs, and no software or hardware to deploy. AgreeYa's **VDIXtend** is a hosted virtual desktop (HVD) solution that enables you to easily provision virtual desktops within minutes and customize them with software from the App Store. For more information on VDIXtend visit www.VDIXtend.com.

Application Virtualization

Application Virtualization is gaining ground as countless companies are now beginning to see it as an absolute necessity in the competitive world of business. This technology transforms applications into centrally-managed virtual services that are never installed and don't conflict with other applications. Application Virtualization provides the agility needed to support business growth by reducing costs, heightening IT control, dramatically improving security and mobile access. AgreeYa will help you leverage Application Virtualization to streamline your organization's applications environment, boosting productivity and security throughout. Our experience and expertise in deploying leading industry solutions, Microsoft App-V and VMWare ThinkApp, apply to small, medium and large companies.

Why AgreeYa for Virtualization

Collaborative and Customer First Approach: AgreeYa will work closely with you to help develop a customized solution that will minimize your TCO. We will help you reach your CapEx/OpEx goals and determine what model best suits your needs (Physical, VDI On-Premise, Hosted VDI or a hybrid model).

Competitive Pricing: AgreeYa's services are extremely competitively priced and we utilize the O³ (onsite-onshore-offshore) model to pass on savings to our customers.

Excellent Customer Support: AgreeYa has the highest SLA standards for our customers as well as 24/5 email and phone support.
