Site Administrator

A Solution Which Empowers You to Transform Your SharePoint Environment

All the significant fortune 500 companies today depend on SharePoint to manage work of their workforce. While this dependency on SharePoint is massive, the users still don't know what goes in their SharePoint environment and they struggle to drive benefit from it.

SharePoint needs constant attention and a regular assessment of SharePoint environment, to align it with your business needs. While this process is followed at the time of deployment, this should be included in the yearly audit plan too. In-depth knowledge of the SharePoint environment has the power to maximize business's opportunities by opening doors to avenues and resolving the unresolved challenges.

Yet, working on SharePoint continues to send tremors in its users, given the difficult-to-get-through complexities associated with it. This difficulty is more related to the users' inability to understand the entire SharePoint environment, which is imperative to accurate a well thought-out decision making. While they aspire to roll out best practices and policies that yield results, they are stuck in a struggle to understand the SharePoint environment.

Site Administrator brings an insight into complete SharePoint environment, enabling implementation of a flawless management, auditing, & security of tasks. This product works to centralize action management and policy enforcement of each report, which results in informed and effectual decision making.

It is essential to expand the horizons of understanding when it comes to SharePoint, and this is what Site Administrator does. Site Administrator for SharePoint is a web-based tool, designed to simplify site management and bring complete control of collaboration platform in site owner's control. An automated management console, it enables a consolidated management of SharePoint, 2007, 2010, 2013, 2016, environment and Office 365, which includes farms, servers and, instances you don't even know about. It functions by helping you discover, understand, and manage the entire SharePoint environment by allowing an insight into SharePoint servers, sites, and site collections. This tool empowers a user to quickly achieve access to several reports that lead to developing of effective policies and practices and dodging of challenges such as support backlogs, server storage issues, and weak network performance.

The Control Room of your SharePoint

Site Administrator for your SharePoint is a governance system that helps you better establish policies, ensure compliance and achieve robust results. You can outline and plan an approach in detail, make estimations, and go under these key activities on your system.

Its Suit of Activities

Perform Discovery on SharePoint Environment

Identify- Managed Servers, Unmanaged Servers, and document errors.

Correct Errors on SharePoint Servers

Perform discovery to refresh the list and remove the servers that are not to be managed by this instance of Administrator.

Services Activities

Install and configure Site Administrator, Perform Discovery on SharePoint Environment involving: Identify Managed Servers, Identify Unmanaged Servers, and Document Errors, and Correct Errors on SharePoint Servers

Discuss Reporting

Provide knowledge transfer on available reports and impact of collection, determine which reports are necessary/desired for

each server, establish policies for retention of reports, and develop resource usage table to determine future costs of reporting.

Enable Reporting

Enable the entire reporting: Configure report gathering, turn on appropriate reports, schedule execution of reports, and set-up e-mail notifications on key reports

SharePoint Administration

Complete control over SharePoint Administration: Perform knowledge transfer on SharePoint administration, discuss best practices, document current high-level SharePoint environment and provide guidance on management of SharePoint sites.

Policy Manager

A feature that permits knowledge transfer to Policy Manager and a discussion on current policies and Service Level Agreements with site and document owners; such as content limitations, security, and audit. Also, it permits mapping of document and site policies for continuity; such as Policies and Alerts.

Apply Policies to Site and Documents

Review plans for Recovery Manager (Optional with purchase of Recovery Manager for SharePoint), discuss current backup and recovery system and processes, and install and configure Recovery Manager for SharePoint.

Management

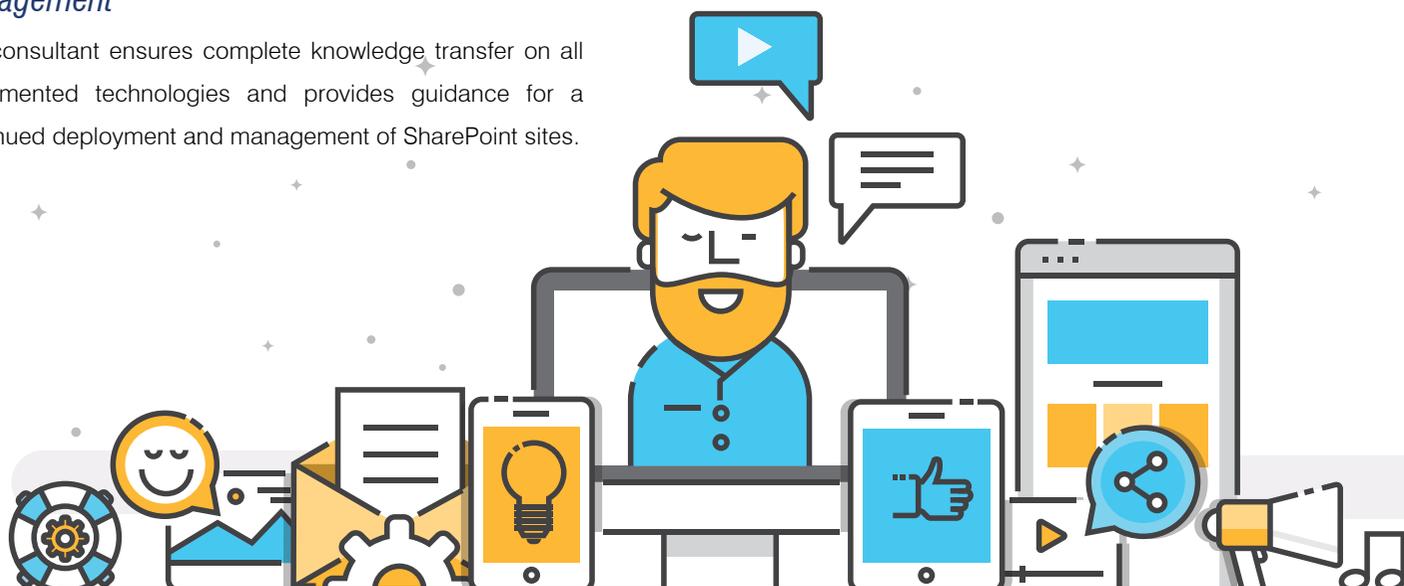

The consultant ensures complete knowledge transfer on all implemented technologies and provides guidance for a continued deployment and management of SharePoint sites.
